

Case Study: Museum Display

Challenge

NZKiosk was contacted by NIWA in conjunction with Hawke's Bay Regional Council to determine whether its current kiosk enclosure would be suitable for a tsunami display for the National Aquarium project. NIWA had developed its own in-house software and required a solution that the public can interact with the software.

Result

The unit was deployed successfully with the public interacting with the unit easily. The display was so successful that the museum also installed a large plasma TV above the kiosk unit for the public to view.

Solution

NZKiosk supplied to NIWA, a single kiosk enclosure with a touchscreen installed ready for NIWA to connect its own computer and install its highly sophisticated software.
